

# Profile cutter, tipped

Robust profile tools  
with brazed cutting edges

The profiling of soft and hard woods requires tools that are particularly robust and wear-resistant. Resin, dirt, dust and inclusions in the timber cause common tool systems to wear out quickly, thus reducing their performance and ultimately the quality of the processing.

The tipped profile cutter from Leitz combines the benefits of the stable tool body and the wear-resistant cutting materials to a powerful and long-lasting tool system. A perfect basis for outstanding processing quality.

## YOUR BENEFITS

- Highest processing quality
- Long tool life
- Low maintenance
- Reduction of set-up times

## AT A GLANCE

- Versatile design options adapted to customer requirements
- High concentricity
- Can be resharpened several times
- Diameter 80-300 mm
- Suitable for all conventional machine types
- Can be used in soft and hard woods
- Available at short notice
- Cutting material HS, HW or with Marathon coating

*E.g. for the production of tongue and groove joints which are commonly used for ceiling and wall claddings. Tipped profile cutters from Leitz are ideal.*

Up to 25 times 3 to 5 times

RESHARPENABLE

LONGER TOOL LIFE  
DUE TO MARATHON  
HIGH PERFORMANCE  
COATING

## Your benefits due to ...

### RELIABILITY

#### Hard-wearing tool design

- Simple and robust tool design, also for rough/unstable applications
- Tool function not affected by resin or dust due to simple tool design

### PRODUCTIVITY

#### High usability due to long service life

- Maximum tool life thanks to optimum cutting material used

### SUSTAINABILITY

#### Effective use of resources

- Ideal use of cutting material qualified by several resharpenings
- Saves resources through partial re-use of the tool body

The robust and low-maintenance tool system.
